

## **Functional**

### **Functionality**

- Be able to hide or remove unused courses
- Add a feature to let students delete submissions
- Add a feature to allow students to view course material offline, this could be through an app or download of all material from a section or entire course

### **Usability**

- Have current schedule from the mycommunications added to the calendar in D2L
- Add an organized section that includes all due dates for all assignments across all courses and lists them in chronological order
- Add an option for a dark theme
- Add a profile system where we can find the discord of teachers or students.
- Include the submission in the submission receipt email as well as the class or assignment name
- Add the ability to set up and send notifications for upcoming assignments

## **Non-Functional**

### **Performance**

- Add BCIT webmail to D2L instead of a separate website

## **Explanation**

All the requirement under the Functional heading all add a feature that users would use to interact with the website. The only Non-Functional requirement is adding webmail to D2L. I think it is Non-Functional because the change would be purely a performance change. The look and feel of the webmail would stay the same but instead, be processed through the D2L site. As for the functional requirements, I categorized requirements that would change the aesthetic or provide better visual representation and documentation into Usability.
