

## Job Description

### Software Development Engineer in Test (Android)

Global Relay Communications Inc.

Posted January 18, 2023

Vancouver

#### Job Overview

##### Who we are:

For over 20 years, Global Relay has set the standard in enterprise information archiving with industry-leading cloud archiving, surveillance, eDiscovery, and analytics solutions. We securely capture and preserve the communications data of the world's most highly regulated firms, giving them greater visibility and control over their information and ensuring compliance with stringent regulations.

Though we offer competitive compensation and benefits and all the other perks one would expect from an established company, we are not your typical technology company. Global Relay is a career-building company. A place for big ideas. New challenges. Groundbreaking innovation. It's a place where you can genuinely make an impact - and be recognized for it.

We believe great businesses thrive on diversity, inclusion, and the contributions of all employees. To that end, we recruit candidates from different backgrounds and foster a work environment that encourages employees to collaborate and learn from each other, completely free of barriers.

We encourage you to apply if your qualifications and experience are a good fit for any of our openings.

##### Your Role:

As a Junior Software Development Engineer in Test (Jr. SDET), you will be part of a small, highly focused team responsible for delivery of highly scalable and robust services within Global Relay's platform. In this entry level position, you will work as part of an agile development team and work directly in code on testing solutions for web applications and API services of a large scale system.

##### Your Job:

- Be part of an agile development team and participate in team planning and story grooming
- Test application code to find and report defects
- Define and automate test cases
- Conduct code reviews and improve the quality of automation code
- Contribute to decisions in the architecture and design of test frameworks

- Support the release of new software
- Learn about our customers, products, systems, methods and tools.

**About You:**

- Undergraduate degree in Computer Science or related field
- Proficiency with Java or Javascript
- An aptitude for problem finding and solving
- An interest in software quality and in quality assurance and testing as a career
- Experience with any of the following is an asset:
  - Testing backend systems or APIs with tools such as Postman or REST-assured
  - Testing web applications with Selenium WebDriver
  - Testing frameworks such as JUnit or Mocha
  - Testing performance with JMeter or similar tools
  - Web services technology such as REST or JSON
  - Big data technology such as Kafka, Hadoop, MongoDB or SQL
  - Continuous integration systems such as Jenkins or Bamboo

**What you can expect:**

At Global Relay, there's no ceiling to what you can achieve. It's the land of opportunity for the energetic, the intelligent, the driven. You'll receive the mentoring, coaching, and support you need to reach your career goals. You'll be part of a culture that breeds creativity and rewards perseverance and hard work. And you'll be working alongside smart, talented individuals from diverse backgrounds, with complementary knowledge and skills.

Global Relay is an equal-opportunity employer committed to diversity, equity, and inclusion.

We seek to ensure reasonable adjustments, accommodations, and personal time are personalized to meet the unique needs of every individual.

We understand flexible work arrangements are important, and we encourage that in our work culture. Whether it's flexibility around work hours, workstyle, or lifestyle, we want to ensure our employees have a healthy work/life balance. We support and value a hybrid work model that blends collaboration with the team in the office and focus time from the comfort of your home.
